In August 2018, Autodesk acquired the cloud-based collaboration software company Revit, and the Office 365 productivity suite. With these acquisitions, Autodesk has grown into a leader in desktop CAD and design software, and a leading provider of cloud-based solutions for designers. AutoCAD was developed in the late 1980s by Tom LaFountain (and his team) at the Palo Alto Research Center (PARC) of Xerox Corporation. The first AutoCAD beta version was released to the general public in 1987. In late 1992, the initial CAD software was released as AutoCAD R14. AutoCAD is the most popular and widely used desktop-based CAD software in the world. The software is created and sold by Autodesk, and is aimed at architects, engineers, and civil and mechanical engineers, as well as other professionals who use technical drawings in their work. AutoCAD is available in several commercial editions, and includes several professional and student versions. Today's AutoCAD tools have more than three decades of growth and development. Autocad Ref Autocad's Ref package provides a fast method of drawing in the distance, using a perspective camera. It is a subset of the traditional CAD (Computer-Aided Design) process, which is to conceptualize an idea, design the object, determine dimensions, and then render it in 3D. Autocad's ref package is useful when working with objects that may have a shape that is not easily discernible; such as a box, an elliptical object, or a compound object with a shape that is more difficult to comprehend. The ref package allows one to draw a 3D concept of an object, as well as determine its dimensions and centering. It can also be used in order to avoid the redrawing of objects that are already visible, which may save a significant amount of time and resources. Rendered Modeling One method of setting up a CAD system is rendering models from 3D data; for instance, a car's model may be rendered and then handed over to a CAD system to be manipulated in 3D. This method of setting up a CAD system is commonly used in order to allow a system to render and manipulate multiple 3D files. In an attempt to streamline this process, the Autodesk rendering software is used to render the model in order to render multiple 3D files. Once the files have been rendered, the user can take advantage of the autodesk viewer. The Autodesk viewer provides the ability to see and manipulate the 3D models in real-time. The Autodesk rendering software will accept various file types, including: 3D Studio MAX, 3ds max, 3D Studio Alias, Alias Wavefront 3ds max, Alias, Alias Wavefront Autocad Ref Autocad's Ref package provides a fast method of drawing in the distance, using a perspective camera.
